

THE SECURITY CHECKLIST FOR BUSY LAWYERS (DON'T GET HACKED)

29% of law firms have experienced a security breach

Some records you don't want to be a part of, like the 2020 ABA TechReport's finding above. And like this year's expected record number of new data breaches.

Keep cybercriminals out of your law practice and your pockets by making smart cybersecurity choices.

brought to you by:

BobaGuard
TURNKEY CYBERSECURITY SUITE

Are you ...

Using multifactor authentication to keep hackers out?

Utilizing secure shared password vaults for sensitive credentials?

Providing guidelines to employees on what to do and not to do when working remotely?

Watching for dark web credential compromise surprises?

Running phishing simulation at least monthly?

□ Making security awareness training mandatory, even for execs?

□ Improving your company's cyber resilience with layered security?

□ Following cybersecurity best practices and maintaining compliance?

□ Reviewing and practicing your cybersecurity incident response plan?

□ Running proactive monitoring, maintenance, and patching on your computers with antivirus and web protection

Want quick tips to increase security?

Our **Stupid Simple Security Tip** weekly series, may be just what the cyberdoctor ordered! Did you know only 39% of lawyers are making use of two factor authentication (2FA)? Stupid Simple Security Tip #13 discusses [the importance of using 2FA](#).

BobaGuard takes care of all your security needs, without the need of dealing with yet another IT provider, so you can focus on what's most important: growing your practice.

- Implement the security solutions you need as a solo or small firm lawyer.
- Keep your computers current with automated software and security updates.
- Greatly reduce your chance of getting hacked, without spending your time doing the research and playing the 'security expert'.

**If cannot check off every box on this list,
you are a sitting duck for cybercriminals.**

BobaGuard is a turn-key solution that provides a layered security approach to greatly reduce your chances of getting hacked.

Grow your practice without worry using the proven protection system that drastically reduces cybercriminals' threats to your data (without having to spend your time figuring out the tech).
